

## **Extension Activity Report 2021-2022**

Department of Microbiology always work for the welfare of the society through extension activity of the department. During the session 2021-2022 department run the Blood group checking and Haemoglobin percentage checking of the neighbourhood people including children.

This year NSS camp was held at Nagzari village. On 2<sup>nd</sup> April 2022 Department of Microbiology contributed this camp by providing extension activity Blood group detection for village people. Very good response was given by the residential people. A total of 200 individuals were tested during this event. Faculty members of the Microbiology department and students made this event successful. World Health Day (7<sup>th</sup> April 2022) celebrated by Microbiology Department. The theme of the event was **“Our Planet Our Health”**. On occasion of this event Microbiology Department organizes health camp for entire students and staff of the college. This camp includes Blood Group Detection, Hb% Detection, Blood sugar and B.P. measurement. A huge response was shown to the event a total of 214 students (other than Microbiology Department) and staff members got benefited from this event. All the teaching faculty of the department and a group of final year students organized said event in very good manner by maintaining strict hygienic practices. Further Microbiology Department conducted Hb% Detection in female and Blood Group detection for higher secondary school children as the department Extension activity at HingnaKovtal on 26<sup>th</sup> April 2022. In this event 83 young and adult females checked their Hb% along with school children of the village. Three faculty members of the department and group of 10 students from final year successfully conducted this activity.

This extension activity sensitized the students about their social responsibility and how they could help society through their knowledge and skill developed during degree education. Such activity increases their interest in the subject and develops self responsibility towards society.

**Extension activity of Microbiology Department held at Hingna Kavtal Village**

### **Outcomes of the Extension activity**

Department of Microbiology always try to aware the students about neighbourhood community, through extension activity. This extension activity sensitized the students about their social responsibility and how they could help society through their knowledge and skill developed during degree education. Such activity increases their interest in the subject and develops self responsibility towards society. When students interact with the people of the rural area and try to understand their problems than the current situation of them make them to think about social issues in the community. Department got huge success in this activity and students are satisfied with so many ideas arises in their mind.
